

LEDDS6001

INSTRUCTION MANUAL LED FILAMENT DIMMING STABILISER

The Tradim dimming stabiliser can be applied to improve the dimming behaviour of 230V (filament) LED lamps.

INSTALLATION:

- Only install the dimming stabiliser when the power is switched off!
- Place the dimming stabiliser as close to the lamp as possible and parallel over the lamp.
- The best result is obtained with an R,C dimmer (e.g. Tradim 2490HP or 2485H-series).

The manufacturer is not liable for damage caused by the incorrect use or incorrect installation of the dimmer. The warranty period is 2 years from the date of purchase, to be proven to the retailer by means of your purchase receipt.

Keep this manual in a safe place in case it is needed for (re)installation!
